Summary

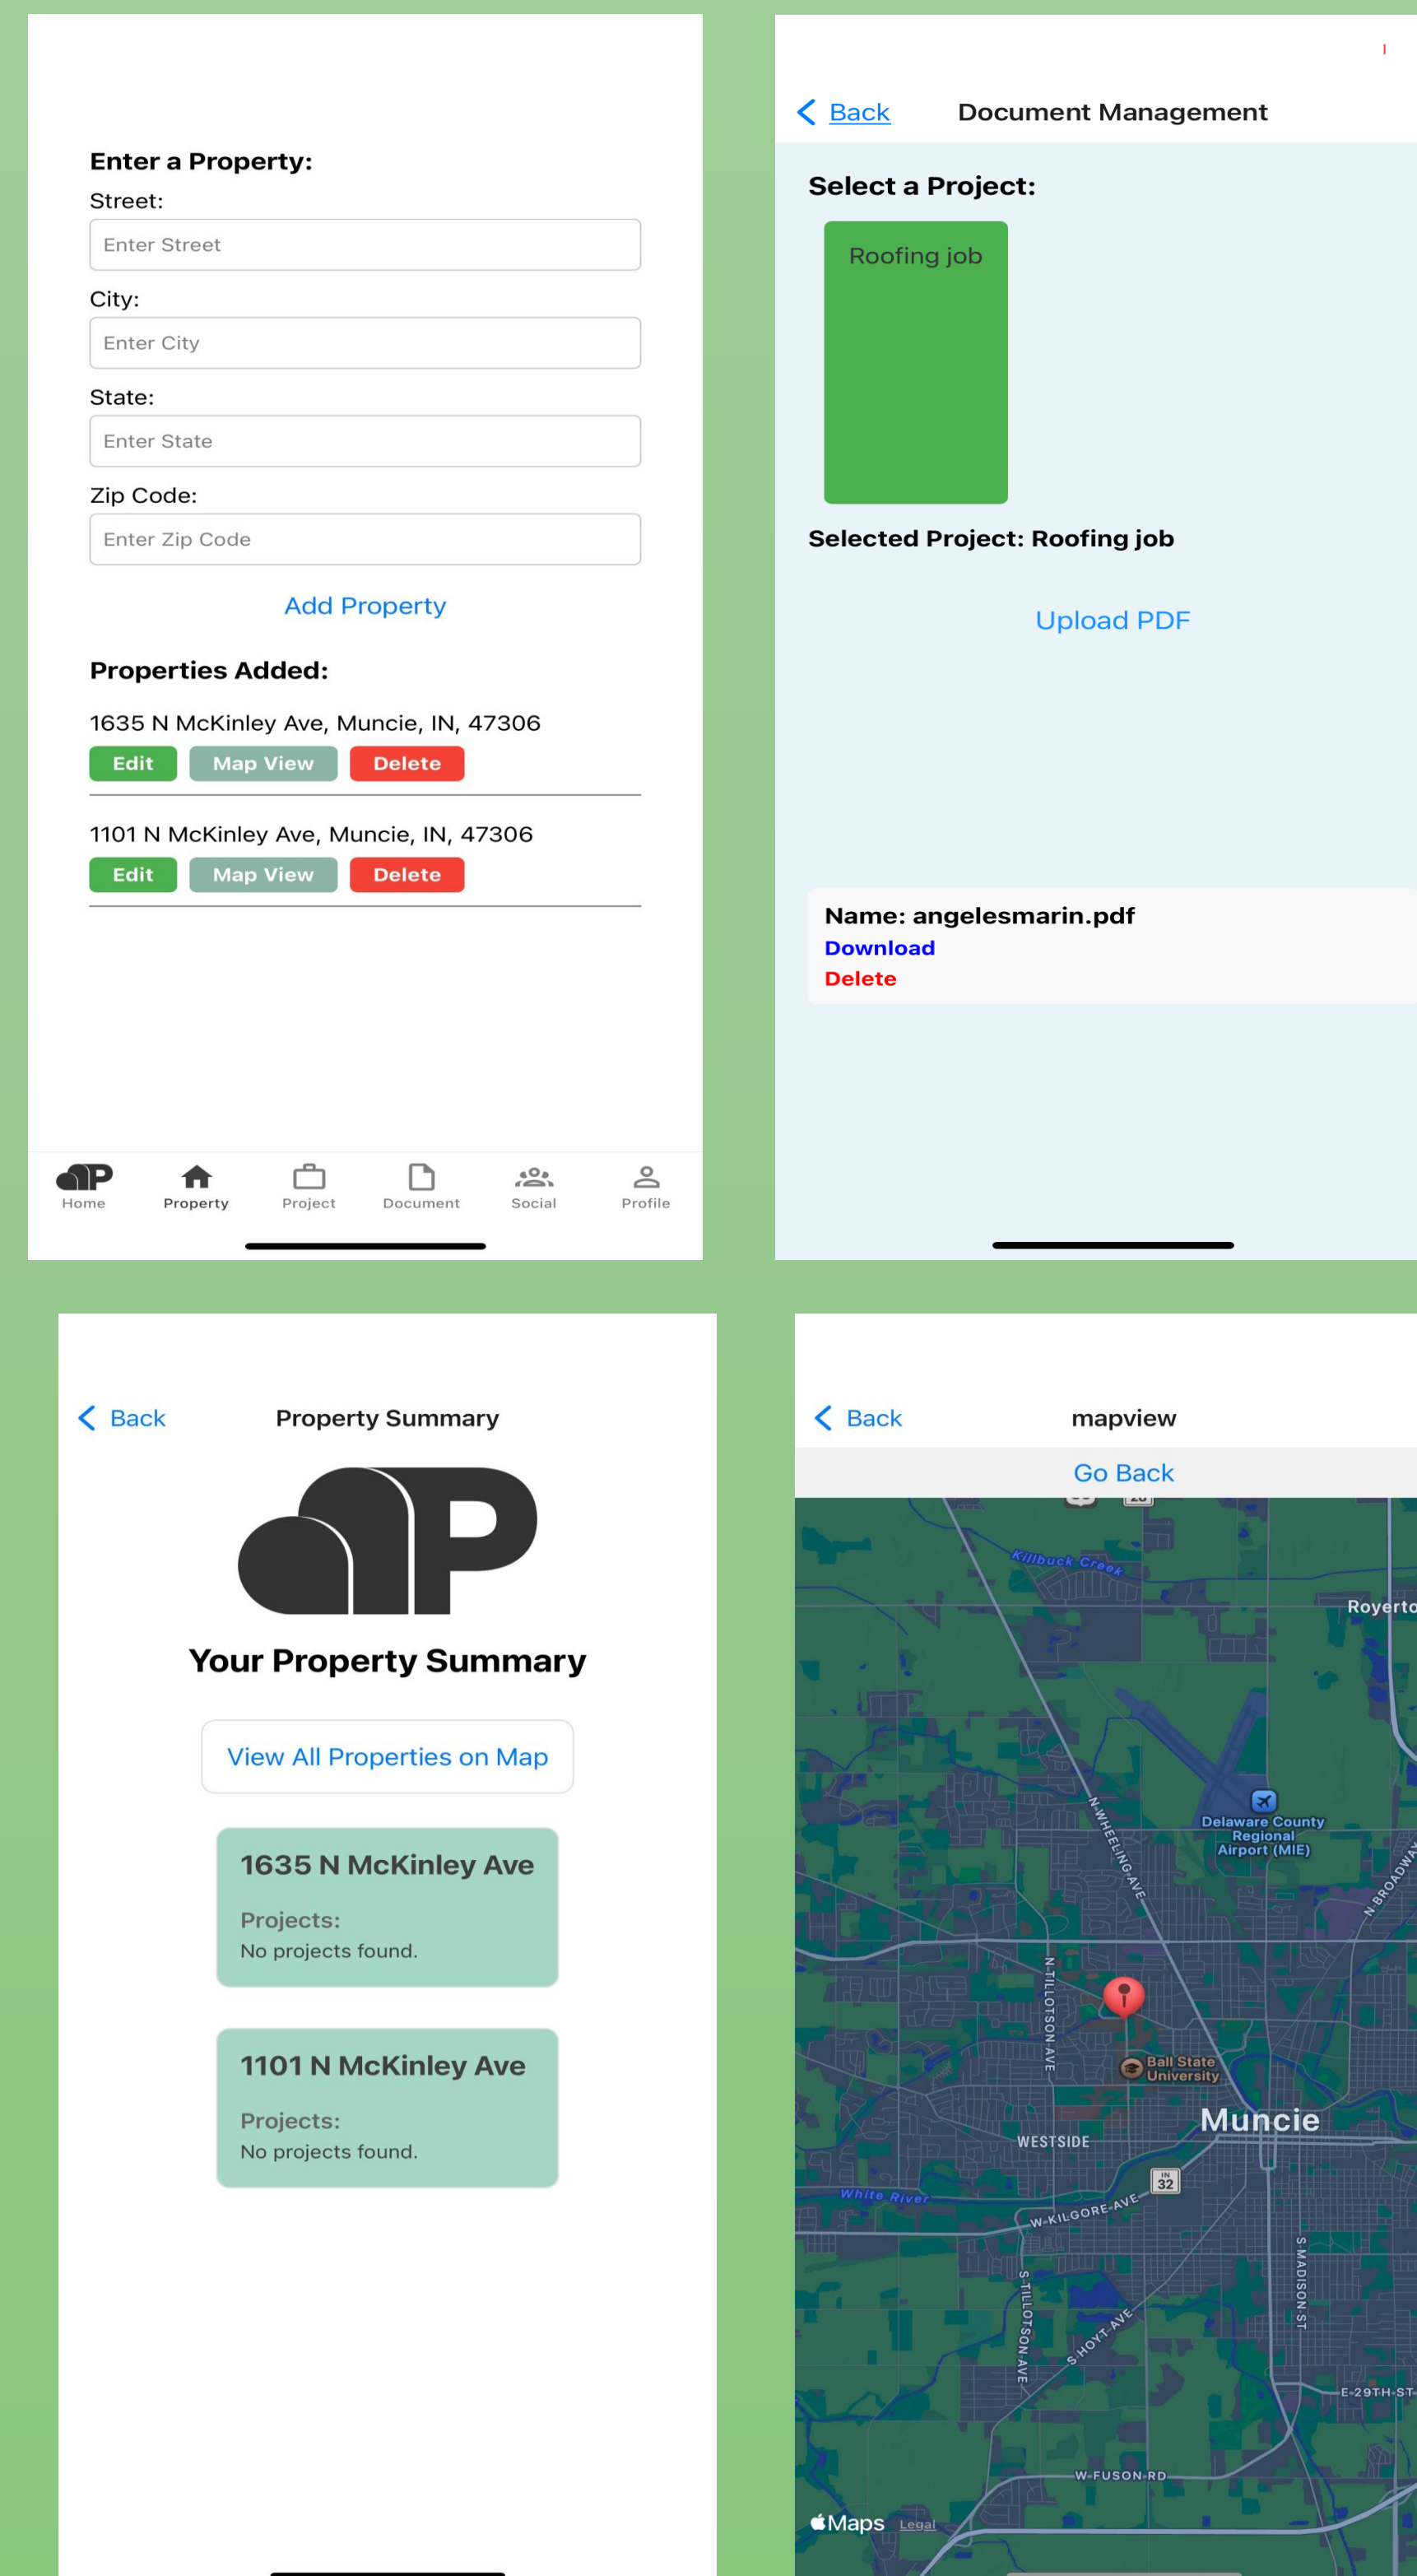

This is a property management app made for Placenet. It allows property owners to track and manage their properties, projects, and documents all in one place. Potential buyers can view the info of specific properties to see what work has been done on them and make informed decisions.

Features

- Add, edit, and remove properties from your profile.
- Attach projects and related documents to those properties.
- View your properties individually or all together on an interactive map.

Tech Stack

- React Native
- Node.js
- Firebase
- GitHub
- Visual Studio Code

Placenet

Placenet is a company based in Indiana that offers solutions for homes, owners, and tenants for community property management and care.

Acknowledgements

- Instructor: Huseyin Ergin, Ph.D.
- Placenet Client: Kazem Namazi
- Mentor: Noah Oosterhoff
- Ball State Department of Computer Science

Conclusion

Placenet has been an incredible project for every member of this team. All of our skills in planning, coding, and designing have improved as a result. This is also thanks to our professor, client and mentor for being incredibly supportive and patient as we learned, honed, and refined our skillsets.
